RODICA SERAFIM

Abstract. The catalogue presents Palaearctic Cerambycidae coleopteran species of the subfamilies Necydalinae and Cerambycinae preserved in the collections of „Grigore Antipa” National Museum of Natural History of Bucharest.

Resumé. Le catalogue présente les espèces de coléoptères paléartiques de Cerambycidae, sousfamilles Necydalinae et Cerambycinae gardés dans les collections du Muséum National d'Histoire Naturelle „Grigore Antipa” de Bucarest.

Key words: Coleoptera, Cerambycidae, Necydalinae, Cerambycinae, catalogue, collections, “Grigore Antipa” National Museum of Natural History, București (Bucharest).

INTRODUCTION

The Cerambycidae collection preserved in “Grigore Antipa” National Museum of Natural History from București (Bucharest), consists of:

- material from the old coleopteran collection from the Palaearctic area (which gather specimens from Richard Canisius, Deszö Kenderessy, Eduard Fleck, Fridrich Deubel, Arnold Lucien Montandon, Emil Varady collections, acquired between 1883 – 1923);
- lots of material from Dr. Nicolae Săvulescu's collection acquired between 1961 – 1982 and material from the same collection, which were included in the Museum patrimony in 1992, after Dr. Nicolae Săvulescu's death;
- specimens obtained by exchange with foreign specialists and collectors;
- donations: Mihai Șerban Procheș, Viorel Ungureanu;
- material collected in the field in Romania by the specialists of the “Grigore Antipa” Museum and by their collaborators, during 1946 – 2008.
- material collected from Morocco, Turkey, Bulgaria, Tunisia, Syria (Expeditions of „Grigore Antipa” Museum in the Mediterranean countries), during 2005 – 2008.

A large part of the information given by the specimens from the collections was reevaluated in by scientific papers.

The first data on the material of the old collections, which now belong to the Museum patrimony, were published by Fleck (1905), Montandon (1906, 1908).

Panin and Săvulescu (1961) published the material, collected till 1960, in the fascicle of Romanian fauna.

A part of the data were published by Negru & Roşca (1967), Serafim (1985, 1997, 1998, 2004), Serafim & Maican (2004, 2008), Ungureanu, Maican & Serafim (2008).

The collection catalogue was published in several steps:

In the first part of the Catalogue of Cerambycidae species, data concerning 25 species of the subfamilies Prioninae (tribes Prionini and Aegosomatini) and Lepturinae (tribes Oxymirini, Xylosteini, Rhamnusiini and Rhagiini) were published (Serafim, 2005).

In the second part, 53 Palaeartic species of the subfamily Lepturinae, tribe Lepturini, are presented (Serafim, 2006).

In the third part, 10 Palaeartic species of the subfamily Spondylidinae (tribes Anisarthronini, Asemeni, Saphanini, Spondydini) are presented.

In the fourth part of catalogue two Palaeartic Cerambycidae species of the subfamily Necydalinae and 91 species of subfamily Cerambycinae are listed. Most part of the material (68 species) originates in Romania.

The species identification was made by Sergiu Panin¹, Nicolae Săvulescu², Ştefan Negru³, Atena Roşca⁴, Rodica Serafim.

Nomenclature and systematical order are according to those used by Sama (2005) in "Fauna Europaea", Danilevsky (2007) in "A check-list of Longicorn Beetles (Coleoptera, Cerambycoidea) of Europe" and Hoskovec & Rejzek (2009) in "Longhorn beetles (Cerambycidae) of the West Palaeartic region".

¹ Sergiu Panin, author of the volume of Cerambycidae fauna (1961).

² Nicolae Săvulescu, author of the volume of Cerambycidae fauna (1961). He worked at the museum a short period of time, but he was a most faithful and a most important collaborator of this institution.

³ Ştefan Negru worked at the museum from 1963 to 1970.

⁴ Atena Roşca, worked at the museum from 1954 to 1976.

DISCUSSIONS

The specimens of the acquired collections at the end of the 19th century and the beginning of the 20th are preserved for their historical value, although not all of them have collecting data. The specimens of Deszö Kenderessy collection, an amateur entomologist from Transylvania, were collected at the end of the 19th century from Haţeg Depression. The collection material of the amateur entomologist Eduard Fleck, acquired in 1914, was collected especially from the Bucegi Mountains, most of them from Azuga. A large number of the specimens of the Fridrich Deubel collection (amateur entomologist from Braşov), acquired in 1923, originates in the surroundings of Braşov. Arnold Lucien Montandon collection consists of coleopterans collected at the end of the 19th century and the beginning of the 20th one, from the royal estate of Broşteni, the Carpathian Mountains (Suceava County), Comana Forest (Giurgiu County) and Dobrogea.

The species of Romanian fauna represent 90.66 % in collections.

Pronocera angusta, a rare species, is distributed in Central and South-East Europe, Russia. From Romania, it was reported from Băile Herculane, Baia-de-Criş, Borsec, Tuşnad, Târgu Secuiesc, Câmpulung Moldovenesc (Panin & Săvulescu, 1961).

Ropalopus ungaricus is a rare and endangered mountainous European species. From Romania, it was reported from Cluj (Petri, 1912). In Eduard Fleck's collection one specimen is preserved, collected from Azuga (Bucegi Mountains).

Semanotus russicus is distributed in South-East and Central Europe, North Africa, Near East, Transcaucasia. From Romania, it was reported from Câmpulung Moldovenesc, Lovrin (Panin & Săvulescu, op.cit.), Băile Herculane, Domogled Mt. (Kovacs and col., 1998-1999). In the collections of “Grigore Antipa” Museum there is one specimen collected from Vaidacuta.

From Romania, *Semanotus undatus* was reported from Broşteni (Montandon, 1906), Câmpulung Moldovenesc, Sighişoara, Braşov (Panin & Săvulescu, op. cit.). In collections, there are three specimens, collected from Cindrel Mountains, Păltiniş, in April 1950 (unpublished data). The species occurs in Europe, East Palaearctic, Oriental region.

Cerambyx cerdo is the single species of the genus *Cerambyx* with protection status in Romania and Europe. In Romania, *Cerambyx cerdo* coexists with *C. scopolii*, *C. miles*, *C. nodulosus* and *C. welensii*.

From Romania, *Cerambyx miles* was reported from Băile Herculane, Cleanov, Apold, Sibiu, Piteşti (Panin & Săvulescu, op.cit.), Comana Forest, Pasărea Forest (Serafim, 1985), Racoviţa, Bucovăţ, Leamna (Serafim, Chimişliu & Lila, 2004). It occurs in South, Central and East Europe, Near East, the Caucasus, Transcaucasus.

Cerambyx welensii occurs in South, Central and East Europe, Near East, the Caucasus, North Africa. From Romania, it is reported from Băile Herculane, Ineu (Panin & Săvulescu, op. cit.), Oglănic Valley (Ruicănescu, 1992), Bucovăț, Leamna (Serafim, Chimișliu & Lila, 2004). In the collections of „Grigore Antipa” Museum there is material collected from Gura Văii, Balota, Canaraua Fetii (unpublished data).

Cerambyx nodulosus is distributed in South-East Europe and Near East. In Romania, only in Banat: Băile Herculane and Cireșu.

Lampropterus femoratus, a rare species in Romania, occurs in Albania, Bulgaria, Cyprus, European Turkey, Greece, Macedonia, Ukraine, Yugoslavia, Near East.

Clytus tropicus and *Cyrtoclytus capra* are rare species in Romania.

From Romania the species *Xylotrechus pantherinus* is reported only from Tușnad (Tasnád) (Petri, 1925-1926), from Pojoga and Buhaz sand level, the Danube Delta (Panin & Săvulescu, op.cit.).

In Romania *Plagionotus bobelayei* is reported only from the Danube Delta. It occurs in Canary Is., Balkan Peninsula, Ukraine, Crimea, South Russia, Near East.

Chlorophorus hungaricus has been cited by Montandon (1906) from Comana. The species occurs in Central Europe, the Balkan Peninsula, Near East. In the collection there are specimens collected at Plăinești.

Chlorophorus trifasciatus occurs in South, South-East and Central Europe, North Africa, Near East. In the collection of „Grigore Antipa” National Museum of Natural History, there are specimens collected from France, Italy, Romania (Banat, Comana Forest, Vidra).

Calchaenesthes oblongomaculatus occurs in Bulgaria, Cyprus, Greece, Near East. In the collection there are two specimens from Esehioi Forest (Southern Dobrogea).

Asias halodendri was recorded by Panin & Săvulescu (op. cit.) as *Asias ephippium* (based on the single specimen collected from Mihai Bravu Forest, Giurgiu County). Now, *Asias ephippium* is considered a subspecies of *Asias halodendri*. *Asias halodendri ephippium* has been found in Albania, Bulgaria, South European Russia, European Kazakhstan, Ukraine (Danilevsky, 2007).

Until now, in Romania, *Nathrius brevipennis* is known only from Sibiu (Panin & Săvulescu, op. cit.) and București (Serafim, 1985). The species is considered cosmopolitan, being introduced with wooden wrapping in China, North America and South America. Probably, it reached Romania by the same way.

Purpuricenus desfontainii desfontainii occurs in North Africa, Crete, Greece. *Purpuricenus dalmatinus* occurs in the Balkan Peninsula, Turkey, Syria.

Brachypterothoma ottomanum occurs in the Balkan Peninsula, Italy, Sicily, Near East. The presence of this species in the Romanian fauna is not excluded. In the Kenderessy's collection there is one specimen, but without collecting data.

Semanotus laurasii occurs in Corsica, France, Sardinia, Spain, North Africa. In the collections of “Grigore Antipa” Museum, there is one specimen, collected from Algeria.

Chlorophorus ruficornis is an endemic species of Spain and France. *Chlorophorus aegyptiacus* occurs in Bulgaria, Greece, Macedonia, Crete, Near East.

Chlorophorus pilosus, West-Palaeartic species, occurs in Balearic Is., Canary Is., France, Portugal, Sardinia, Spain, North Africa.

Neoclytus acuminatus is a native species to North America and, in the last century, it was introduced in Europe, in infested ash timber. The species occurs in

South France, Switzerland, Italy, Austria, Hungary, Slovenia, Croatia. *Neoclytus acuminatus* was firstly recorded by Mancu (2005) from Romania. In collections, this species is represented by the material from Croatia and Italy.

Icosium tomentosum atticum is mainly an East-Mediterranean subspecies occurring in Turkey, Balcan Peninsula and reaching South France in the West.

Callimus abdominalis (Olivier, 1795) occurs in South Europe (Croatia, France, Greece, Italy, Sardinia, Sicily, Spain).

Aromia moschata ambrosiaca occurs in South and South-East Europe, Near East, the Caucasus, Iran.

Stenopterus rufus syriacus is distributed from South-West Turkey to Syria and Israel (Özdikmen & Okutaner, 2006).

In the Museum collections there are the following East-Palaeartic species: *Chloridolum japonicum*, *Ch. viride*, *Poecilium maacki*, *Dere thoracica*, *Chlorophorus quinquefasciatus*, *Cyrtoclytus caproides*, *Paraclytus excultus*, *Plagionotus christophi*, *Xylotrechus cuneipennis*, *Purpuricenus spectabilis* collected in Japan and included in collection by a material exchange with the Japanese specialists.

Paraclytus excultus is an endemic species of Japan.

Chloridolum japonicum occurs in Japan and Korea; *Chloridolum viride* in Russia (South of Sakhalin, Kuril Islands), Japan, Korea, Eastern China; *Dere thoracica* in Japan, Korea, China, Laos; *Poecilium maacki* in China, Japan, Korea; *Chlorophorus quinquefasciatus* in China, Japan, Korea, Ryukyu Islands, Taiwan.

Cyrtoclytus caproides caproides, *Plagionotus christophi* and *Xylotrechus cuneipennis* occur in Russia (Asian part), Japan, China.

CATALOGUL SPECIILOR PALEARCTICE DE NECYDALINAE ȘI CERAMBYCINAE (COLEOPTERA: CERAMBYCIDAE) DIN PATRIMONIUL MUZEULUI NAȚIONAL DE ISTORIE NATURALĂ „GRIGORE ANTIPA” (BUCUREȘTI) (Partea a IV-a)

REZUMAT

Catalogul cuprinde datele referitoare la 93 de specii palearticte de coleoptere Cerambycidae din subfamiliile Necydalinae (2 specii) și Cerambycinae (91 specii), păstrate în colecțiile Muzeului Național de Istorie Naturală „Grigore Antipa” (București).

Dintre cele 75 specii de Cerambycinae, citate din fauna României, în colecțiile Muzeului sunt prezente 68 de specii. Dintre acestea se remarcă speciile *Pronocera angusta*, *Ropalopus ungaricus*, *Semanotus ruscicus*, *S. undatus*, *Cerambyx miles*, *C. welensii*, *C. nodulosus*, *Lampropterus femoratus*, *Clytus tropicus*, *Cyrtoclytus capra*, *Xylotrechus pantherinus*, *Plagionotus bobelayei*, *Chlorophorus trifasciatus*, *Calchenesthes oblongomaculatus*, *Asias halodendri ephippium*, *Nathrius brevipennis*.

Purpuricenus desfontainii, *Brachyptero maacki*, *Semanotus laurassii*, *Icosium tomentosum*, *Callimus abdominalis* sunt specii mediteraneene.

Dintre speciile vest-palearticte amintim: *Chlorophorus pilosus* și *Chlorophorus ruficornis* (specie endemică pentru Franța și Spania).

În colecțiile Muzeului se păstrează material provenind din Japonia, aparținând următoarelor specii est-palearticte: *Chloridolum japonicum*, *Ch. viride*, *Poecilium maacki*, *Dere thoracica*, *Chlorophorus quinquefasciatus*, *Cyrtoclytus caproides*, *Paraclytus excultus*, *Plagionotus christophi*, *Xylotrechus cuneipennis*, *Purpuricenus spectabilis*.

Paraclytus excultus este o specie endemică pentru Japonia.
