### A CHECK LIST OF SOUTH AFRICAN LAMIINAE (Coleoptera, Cerambycidae)

by

The Rev. J. WESLEY HUNT, F.R.E.S. (RICHMOND, NATAL)

and

STEPHAN BREUNING, PH.D. (PARIS)

No attempt has so far been made to catalogue the South African species of the Family Cerambycidae. Very little has been published in South Africa on these beetles since Peringuey and Distant made their recordings. Many additions to the list of our species have been made over the years, and recent revisions of most of the Tribes composing this sub-family have assisted in clearing much of the confusion which has hitherto existed.

For the purpose of this list, the line formed by the Cunene and Zambezi Rivers has been taken as the northern boundary of the South Africa region. It is, of course, recognized that such a line is purely arbitrary but it is used as a matter of convenience. Probably no natural boundary exists south of the desert regions of North Africa, but our insect fauna is at present too little known to define a more satisfactory line.

It is thought that a list of South African Lamiinae would be welcome to workers in this country. Original descriptions only have been quoted and synonyms recorded so as to bring the work as much up-to-date as possible. Reference has also been made to the particular parts of the region from which the species enumerated have been recorded, thus giving as much information as possible within the limits of such a list.

The following species appear to have been erroneously recorded from South Africa; no proof exists of their occurrence in the region. *Opsies capra* Pasc., the type in the B.M. is labelled "Old Calabar;" *Dulichium bigibbosum* Thoms., this is a synonym of *Menton* (s.g. *Dulichium*) *Diggesi* Pasc., and is a native of Australia; and *Estola obscura* F., which is a native of South America.

One species, *Lagochirus funestus* Thoms., a native of Mexico, has been imported into South Africa for the purpose of pest control and has become firmly established in the Uitenhage District of the Cape Province; it is, therefore, included in the appropriate place in the list.

In the course of the text two new names are proposed, firstly, *Eunidia Thomseni* Dist. var. *guttata* nom. nov. pro *guttulata* Auriv. *Guttulata* is preoccupied by *Sphenura guttulata* Coqu., which is a species of *Eunidia*. We also propose *Oberea pseudovaricornis* nom. nov. pro *Oberea varicornis* Fahr., which is preoccupied by *Oberea varicornis* Pasc.

We will be grateful to have any errors or omissions pointed out to us, as it is our intention to issue supplements to this list when a sufficient number of species new to the South African region has been discovered. Use will then be made of any such information.
